Olde Gahanna Beautification Plan

Prologue and Intent

The Olde Gahanna Beautification Plan (Plan) depicts a vision for future beautification and traffic calming along the mixed-use corridors of Olde Gahanna. With the onset of major redevelopment along Mill Street, the Olde Gahanna Community Partnership and the City of Gahanna (City) recognize a need to coordinate and encourage improvements as this redevelopment spreads throughout the area.

It is the intent of the Plan to suggest a pattern and framework for beautification of current parcels as well as redeveloped parcels. As owners explore redevelopment opportunities and the City considers infrastructure improvements, it is imperative that the City considers the proposed concepts and configurations for safety, economic, and aesthetic purposes. The Plan provides a guide for these discussions and improvements.

Beautification and Development Principles

The following principles and attached Plan should be considered by the City when evaluating redevelopment, landscaping and infrastructure plans as well as rezoning applications in this area.

- The Plan does not commit the City to specific development patterns or rezoning decisions; however, it should be considered as private proposals for redevelopment progress forward and as public infrastructure improvements are engineered.
- The Plan strongly encourages the use of a coordinated scheme for beautification along the mixed-use and commercial areas of Olde Gahanna.
- This design scheme emphasizes traffic calming, pedestrian safety, and coordinated aesthetics including, but not limited to:
    - pavement treatments to slow traffic and clearly mark pedestrian crosswalks
    - landscaped medians to beautify the area and calm traffic
    - downtown welcome signage and informational kiosks
    - hardscape and greenscape such as topiary, additional street trees, and perennial herbs and flowers
- All rezoning and public infrastructure projects must provide specific landscaping plans with their applications. Landscaping plans must attempt to coordinate with basic design principles inherent in the Plan such as location, pedestrian safety, traffic calming, and materials as expressed in the Plan.
- All landscaping within the road right-of-way will be the responsibility of the City. Landscaping in the public right-of-way or on private property will be the responsibility of the private property owner. A Special Improvement District may also assume this responsibility.
- Parking shall not be considered along Granville Street unless the street is widened or a traffic study by the City indicates it is feasible.
- As redevelopment and infrastructure plans for the area come forward, the realignment or consolidation of curb cuts should be considered. This is to facilitate pedestrian safety, reduce traffic hazards, and to allow for the installation of medians and crosswalks as indicated on the Plan.
