We put the excitement in S.T.E.M. education by offering hands-on-learning for children ages 4 to 14 through FUN activities from designing and constructing video game software and their own play dough concoction to creating LEGO® robots. Building on natural curiosity and developing problem-solving skills, our hands-on-programs will foster a lifelong love of science and discovery in your child.

Fall I: 6 weeks

Junior Scratch Programming

Programming and coding are becoming necessary skills for various fields of engineering. Many of today's engineers spend most of their time in front of a computer: processing, analyzing, and extracting data to help them design, test and improve products and tools. With coding and programming knowledge, today's engineers can work faster and come up with more creative design solutions that otherwise would be out of reach without programming. Scratch introduces children to programming in a logical way by opening the door to the world of programming. Just as any student can be an engineer, any student can program!
